NBS Data Documentation Reports

The following publicly available reports are available from SSA on their website (https://www.ssa.gov/disabilityresearch/nbs_round_7.html)

- **User's Guide for Restricted and Public Use Data Files** (Callahan et al. 2021). This report provides users with information about the restricted use and public use data files, including construction of the files; weight specification and variance estimation; masking procedures employed in the creation of the Public Use File; and a detailed overview of the questionnaire design, sampling, and data collection for the National Beneficiary Survey (NBS)–General Waves. The report provides information covered in the Editing, Coding, Imputation and Weighting Report and the Cleaning and Identification of Data Problems Report (described below) —including, procedures for data editing, coding of open-ended responses, and variable construction—as well as a description of the imputation and weighting procedures and development of standard errors for the survey. In addition, this report contains an appendix addressing total survey error and the NBS.

- **NBS–General Waves Questionnaire** (Callahan et al. 2021). This document contains all items on Round 7 of the NBS–General Waves and includes documentation of skip patterns, question universe specifications, text fills, interviewer directives, and checks for consistency and range.

- **Editing, Coding, Imputation, and Weighting Report** (Grau et al. 2021). This report summarizes the editing, coding, imputation, and weighting procedures as well as the development of standard errors for Round 7 of the NBS–General Waves. It includes an overview of the variable naming, coding, and construction conventions used in the data files and accompanying codebooks; describes how the sampling weights were computed to the final analysis weights for the representative beneficiary sample; outlines the procedures used to impute missing responses; and discusses procedures that should be used to estimate sampling variances for the NBS.

- **Cleaning and Identification of Data Problems Report** (McDonald et al. 2021). This report describes the data processing procedures performed for Round 7 of the NBS–General Waves. It outlines the data coding and cleaning procedures and describes data problems, their origins, and the corrections implemented to create the final data file. The report describes data issues by sections of the interview and concludes with a summary of types of problems encountered and general recommendations.

- **NBS Nonresponse Bias Analysis** (Grau et al. 2021). This report discusses whether the nonresponse adjustments applied to the sampling weights of Round 7 of the NBS-General Waves appropriately accounted for differences between respondents and nonrespondents or whether the potential for nonresponse bias still existed.

- **NBS Public Use File Codebook** (current report). This codebook provides extensive documentation for each variable in the file, including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each

item, constructed variable specifications, and user notes for variables on the public use file. The codebook also includes frequency distributions and means as appropriate.

The following restricted use report is available from SSA through a formal data sharing agreement:

- **NBS Restricted Access Codebook** (McDonald et al. 2021). This codebook provides extensive documentation for each variable in the file, including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes for variables on the restricted access file. The codebook also includes frequency distributions and means as appropriate.

I. Introduction

The National Beneficiary Survey-General Waves (NBS-General Waves), sponsored by the Social Security Administration's (SSA's) Office of Retirement and Disability Policy, collects data on the employment-related activities of working-age beneficiaries of Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI). In 2019, Mathematica conducted the seventh round of data collection since the NBS began in 2004. The first four rounds of the survey—in 2004, 2005, 2006, and 2010—helped glean information about beneficiary impairments; health; living arrangements; family structure; occupation before disability; and use of non-SSA programs (for example, the Supplemental Nutrition Assistance Program, or SNAP). Rounds 1 to 4 also evaluated the Ticket to Work and Self-Sufficiency (TTW) program. In Rounds 5 (2015), 6 (2017), and 7 (2019), we sought to uncover important information about the factors that promote beneficiaries' self-sufficiency and, conversely, the factors that impede beneficiaries' efforts to maintain employment.

For Round 7 of the NBS, we met the goals of the study through three samples: (1) a cross-sectional sample of all beneficiaries (the representative beneficiary sample, or RBS), (2) a cross-sectional sample of a subset of beneficiaries who maintained a minimum level of earnings for a sustained period (a successful worker sample, or SWS), and (3) a subset of SWS cases from Round 6, followed longitudinally in Round 7. We administered the survey to all three of these samples simultaneously.

This codebook aims to assist with data analysis of the Round 7 NBS. It provides an overview of the NBS, including the data collection procedures, sample design, final response rates, and the survey instrument. The codebook provides extensive documentation for each variable in the file, including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes for variables on the public use file. The codebook also includes frequency distributions and means as appropriate.

A. Data collection overview

Mathematica fielded the NBS-General Waves as a dual-mode survey from February 2019 through November 2019. We collected data by using computer-assisted telephone interviewing (CATI), deployed in-person field locators to follow-up with some CATI nonrespondents,[1] and offered computer-assisted personal interviewing (CAPI) to sample members who preferred or needed an in-person interview to accommodate their disabilities.[2]

---

[1] After locating the sample member, the field locator attempted to facilitate an interview with them via CATI, using a cell phone (or the sample member's own phone, if preferred) to call into the data collection center. For a portion of the RBS, we did not employ field follow-up. Instead, we randomly selected telephone nonrespondents for a second phase of data collection involving field follow-up, described later in this chapter, in Section B. We also did not employ field follow-up for a portion of the SWS. Section B of this chapter describes this portion, referred to as the "unclustered" sample.

[2] In Round 7, none of the NBS respondents requested a CAPI interview.

We sought a proxy respondent when a sample member was unable to participate in the survey because of their disability. If no proxy was available and an in-person interview was not possible, we classified the final status of the case as a nonresponse. We made a number of additional accommodations for sample members with hearing or speech impairments, including using a telecommunications relay service (TRS) and amplifiers.

To promote response among sample members whose primary language is Spanish, Mathematica provided the questionnaire in Spanish. For languages other than English or Spanish, interpreters, if available in the sample member's home, helped to conduct the interviews. If no one in the household was available to interpret for the respondent, then we flagged the case as a "language barrier."[3] We elected not to use an interpreter service to help contact and complete these cases, as we did not have a sufficient number in any language that made it cost-effective to do so.

B. NBS–General Waves Sample Design Overview

For all survey rounds, the NBS used a multistage sampling design for both the RBS and cross-sectional SWS, with an independently drawn supplemental single-stage sample for some successful worker populations. In Round 7, we drew the cross-sectional SWS and RBS independently, from separate frames, although the SWS frame was a subset of the RBS frame. This means that some sample members could have been selected for both the RBS and the cross-sectional SWS, resulting in duplicate records if the samples are combined. Because most analyses do not require combining the samples, we did not adjust the RBS and cross-sectional SWS weights for these duplicates. However, in case an analysis would require combining the samples, we also created composite weights that accounted for duplicates (individuals selected for both samples). These composite weights also accounted for those in the RBS who were not part of the cross-sectional SWS but could have been potentially sampled for the cross-sectional SWS because they were part of the SWS frame.

The longitudinal SWS was composed of all sample cases that (1) completed a Round 6 SWS interview and (2) reported to be currently working at the time of the Round 6 survey.[4]

RBS

For the RBS in Round 7, we fielded a nationally representative sample of 11,299 SSA disability beneficiaries. The sample design for the RBS in Round 7 was similar to the design of the RBS in prior rounds, though there were two important changes: (1) we stratified the sample of primary sampling units (PSUs) differently in Rounds 1 through 4 than we did in Rounds 5 through 7, and (2) all telephone nonrespondents were followed up in the field in Rounds 1 through 6, but only a random sample of telephone nonrespondents in Round 7, as described in more detail later.

The target population for the RBS consisted of SSI recipients and SSDI beneficiaries ages 18 to full retirement age who resided in all 50 states and the District of Columbia, excluding outlying

---

[3] At the conclusion of Round 7 data collection, we dispositioned 117 cases as language barriers.
[4] We did not create composite weights that combined sample cases from the longitudinal SWS with any other sample. Longitudinal SWS respondents were selected based on their work activity at Round 6; therefore, they cannot be meaningfully combined with any of the other Round 7 samples.

territories, and who were in an active pay status as of June 30, 2018.[5] As of that date, the target population consisted of about 13.7 million beneficiaries. As in prior rounds, we stratified the cross-sectional RBS by four age-based strata within the PSUs: (1) 18- to 29-year-olds, (2) 30- to 39-year-olds, (3) 40- to 49-year-olds, and (4) 50-year-olds and older. To ensure a sufficient number of people seeking work, we oversampled beneficiaries in the first three cohorts (18- to 49-year-olds). The target number of completed interviews for Round 7 was 1,111 beneficiaries in each of the three younger age groups. For those age 50 and older, the target number of completed interviews was 667 beneficiaries.

To reduce data collection costs, we implemented a two-phase sample design for the RBS in Round 7. Our goal was to achieve the same number of completed interviews (4,000) as in past rounds, but with a greater proportion completed by phone instead of in the field. In Phase 1, we reserved a minimum of 12 weeks for cases to work their way through the prespecified phone interview protocol for each sample release. Next, in Phase 2, we randomly subsampled telephone nonrespondents for field follow-up instead of fielding all of these cases. Because the length of the Phase 1 protocol varied on a case-by-case basis, not all cases were ready for Phase 2 after 12 weeks. By week 15, 27 percent of the total cases that would be selected for Phase 2 were active in Phase 2. By week 25, this increased to 75 percent. By week 35, nearly all Phase 2 selected cases were active in Phase 2. The two-phase approach necessitated increasing the sample size for the RBS compared with prior rounds. Note that, when weighted for the two-phase design, the weighted response rate is the same regardless of the proportion of Phase 1 nonrespondents subsampled for Phase 2.

Cross-Sectional SWS

The cross-sectional SWS was limited to SSI and SSDI beneficiaries who were eligible for the RBS, but were considered "successful workers" because their earnings for a sustained period were sufficiently high. In particular, the SSI and SSDI beneficiaries had to (1) have earnings above SSA's non-blind substantial gainful activity (SGA) monthly earnings level ($1,180 in 2018 and $1,220 in 2019) for a minimum of three consecutive calendar months at any time from August 1, 2018, to July 31, 2019, and (2) be younger than 62 on June 30, 2018.[6] The successful work must have occurred within a time frame so we could interview the vast majority within six months of the end of their successful work (if they were not currently working), and their earnings had to have been revealed in the Disability Control File (DCF) at the time of data extraction—removing from the population any successful workers who had a long delay in

---

[5] Active status includes beneficiaries who currently receive cash benefits and those whose benefits have been temporarily suspended for work or other reasons. Active status does not include beneficiaries whose benefits have been terminated.

[6] We used a 62-year age limit in Round 6 to ensure longitudinal cases would still be younger than 65 at the time of the Round 7 interview. Although we did not plan to follow the Round 7 cross-sectional successful workers longitudinally, we maintained the 62-year age limit in the Round 7 cross-sectional sample for the sake of consistency with Round 6.

having their earnings recorded on the DCF.[7] Using these constraints to define the target population, we identified a population of 101,698 successful workers.[8] From this frame, we fielded a nationally representative sample of 8,590[9] successful workers. We included a screening question as an additional constraint: the sampled successful workers had to indicate they had been working in the past six months.[10] To ensure enough successful workers for sampling, we selected seven samples of successful workers from seven successive mutually exclusive frames. The SWS sampling frames were all subsets of the same sampling frame used for the Round 7 RBS sample, and are therefore referred to as "extracts" from the larger frame. Within each of the seven extracts, we stratified the SWS into two strata defined by beneficiary type (SSDI only and SSI, which included both SSI only and concurrent beneficiaries).

Because of the concerns about the number of successful workers within strata and their distribution across PSUs within each extract, we decided to supplement the main SWS (within the PSUs) with a second independent sample of successful workers. We organized this supplemental sample into two geographic strata (successful workers residing in a PSU, and successful workers not residing in any of the PSUs).[11] We refer to the initial sample design as the "clustered" sample, and to the second independent sample as the "unclustered" sample.[12] We call the combination of data from the clustered and unclustered samples to calculate estimates a "paired" sample design. The clustered sample included in-person follow-up for sample members we could not locate or who otherwise did not respond by phone; the unclustered sample did not have in-person follow-up. We created a single set of composite weights that combined information from the clustered and unclustered SWS, appropriately accounting for the different follow-up rules between the two samples.[13]

---

[7] Some SSI and SSDI beneficiaries would be considered successful workers because their earnings and age met the threshold, but we had to exclude them from the target population for the sampling effort due to a delay in recording their earnings on the DCF. For these individuals, a lag of up to three years exists from when they received their earnings until the earnings data were recorded in the DCF. There was no way to identify them in time for the data extraction. Two years after the completion of this document, the DCF earnings data will be revisited, and the weights will be post-stratified to account for the new information that the updated DCF earnings data will provide.

[8] This count does not include all beneficiaries who had three consecutive months of earnings above non-blind SGA. It includes only those who met that and an additional condition: their earnings were recorded in the DCF at the time of the extraction.

[9] As noted in footnote 11, the cross-sectional SWS includes 152 duplicates in the sample. As a result, we sampled 8,438 unique cases.

[10] The survey included this screening question to account for situations in which a long period of time had elapsed from the case's release date for data collection to the interview date. Few cases were actually removed from the sample due to this screening question, especially in later extracts.

[11] Given that the target population for the NBS did not include Puerto Rico or other outlying territories, we excluded from the frame all beneficiaries and successful workers who resided in these areas.

[12] Because of the small populations of successful workers, Mathematica often selected successful workers who resided in both the selected PSUs for the clustered and in-PSU strata of the unclustered samples. Hence, we had to account for these duplicate cases in the weighting process. There were 152 of these duplicate cases.

[13] These composite weights, combining weights from the clustered and unclustered samples in the SWS, should not be confused with the composite weights that combined the RBS sampling weights and the SWS sampling weights that we briefly alluded to in the introductory paragraphs.

Longitudinal SWS

The Round 7 longitudinal sample consists of Round 6 cross-sectional SWS respondents who were working at the time of the Round 6 interview. In the Round 6 survey, we defined successful workers as SSI or SSDI beneficiaries who (1) were active or in suspense status[14] on June 30, 2016, (2) had earnings above SSA's nonblind SGA earnings level[15] for at least three consecutive calendar months at any time from August 1, 2016, through July 31, 2017; and (3) were younger than 62 on June 30, 2016. (This is the same definition for successful workers that we used in Round 7, except for the dates and SGA earnings levels.) We used an age limit of 62 to ensure that the longitudinal sample cases would be younger than 65 on the date of the Round 7 interview. Of the 4,587 respondents in the Round 6 SWS, 3,712 were eligible for and included in the Round 7 longitudinal SWS.

Table I.1 summarizes the actual sample sizes and number of completed interviews for the RBS, cross-sectional SWS, and longitudinal SWS. Note that the table includes the total across the two samples in the SWS and does not break out the counts between clustered and unclustered samples; this table counts the 152 duplicate cases selected for both the clustered and unclustered samples twice.

Table I.1. NBS–General Waves (RBS and SWS) Round 7 actual sample sizes, target number of completed interviews, and actual number of completed interviews

Sampling strata	Selected sample size	Original target completed interviews[a]	Actual completed interviews
RBS			
Total	11,299	4,000	4,008
18- to 29-year-olds	3,237	1,111	1,127
30- to 39-year-olds	3,291	1,111	1,059
40- to 49-year-olds	3,060	1,111	1,118
50-year-olds or older	1,711	667	704
Cross-sectional SWS			
Total	8,590	3,000	3,016
SSDI only	4,221	1,500	1,493
SSI (SSI only + concurrent)	4,369	1,500	1,523
December 2018 extract	1,757	516	714
SSDI only	833	218	328
SSI (SSI only + concurrent)	924	298	386
January 2019 extract	1,438	456	591
SSDI only	747	222	305
SSI (SSI only + concurrent)	691	234	286
March 2019 extract	1,327	559	446
SSDI only	609	266	207

[14] "Suspense status" refers to the beneficiaries whose benefits have been temporarily suspended because of work or other reasons.
[15] This threshold was $1,090 in 2015 and $1,130 in 2016.

Sampling strata	Selected sample size	Original target completed interviews[a]	Actual completed interviews
SSI (SSI only + concurrent)	718	293	239
April 2019 extract	1,043	394	339
SSDI only	545	215	175
SSI (SSI only + concurrent)	498	179	164
June 2019 extract	1,450	444	429
SSDI only	732	230	216
SSI (SSI only + concurrent)	718	214	213
July 2019 extract	998	348	319
SSDI only	468	193	161
SSI (SSI only + concurrent)	530	155	158
September 2019 extract	577	283	178
SSDI only	287	156	101
SSI (SSI only + concurrent)	290	127	77
Longitudinal SWS			
Total	3,712	2,040	2,068
SSDI only	1,863	1,019	1,074
SSI (SSI only + concurrent)	1,849	1,021	994

Source: NBS Round 7.

[a]The target completed interviews for the SWS shown here were calculated prior to receiving the first extract, using historical data from simulated successful worker populations in 2011–12, 2013–14, 2015–16, and Round 6 of the NBS. In fact, there were actually seven allocations, with a new sample allocation calculated after the population sizes for each extract were revealed. This explains the sometimes large deviation between the target allocation and the actual number of completed interviews

C. Completed Interviews and Response Rates

Mathematica completed 9,092 interviews (including 137 partially completed interviews)[16] by the end of Round 7 data collection. Of these, 4,008 were completed from the RBS; 3,016 from the cross-sectional SWS; and 2,068 from the longitudinal SWS. An additional 261 beneficiaries from the RBS, 311 successful workers from the cross-sectional SWS, and 46 longitudinal SWS cases were deemed ineligible for the survey.[17] Because of the independence of the sample selections for the RBS and the cross-sectional SWS, the clustered and unclustered samples within the cross-sectional SWS, and the Round 6 SWS (the source for the Round 7 longitudinal SWS), individuals could be selected for more than one sample. After accounting for 269 cases

---

[16] We considered partial interviews completed if responses were provided through Section G of the interview.
[17] Ineligible sample members include those who were deceased, incarcerated, in active military, or no longer living in the continental United States as well as those whose benefit status was pending at the time of the interview. For the cross-sectional SWS, ineligibles also included sample members who had not worked in the past six months at the time of the interview.

actually selected for more than one sample, the number of unique completed interviews was 8,823[18]. Mathematica completed all of these interviews by telephone.

We completed proxy interviews for 1,113 sample members in the RBS, 293 sample members in the SWS, and 151 sample members in longitudinal SWS, for a total of 1,557 proxy interviews across the sample groups. Additionally, we completed 242 interviews Spanish: 104 in the RBS, 74 in SWS, and 64 in the longitudinal SWS.

The weighted response rates for Round 7 of the NBS are 54.7 percent for the RBS, 41.0 percent for the cross-sectional SWS, and 54.5 percent for the longitudinal SWS. Please see the Round 7 User's Guide (Callahan et al. 2021) for more detailed information on the final survey dispositions. More information about sample selection and sampling weights is available in the Round 7 Editing, Coding, Imputations and Weighting Report (Grau et al. 2021).

D. The NBS-General Waves questionnaire

The NBS collects data on a wide range of topics—including, employment, disability, experience with SSA programs, employment services used in the past year, health and functional status, health insurance, income and other assistance, and sociodemographic information. Under a separate contract, Westat developed and initially pre-tested the survey items. Mathematica subsequently made revisions to the survey items to prepare the instrument for CATI/CAPI programming and made minor wording changes in response to pre-testing results. For Round 7, we added 11 new questions to the instrument to capture information on longitudinal sample members' previous employment. We also added probes to several questions that longitudinal sample members answered in Round 6, and new response options to several "other/specify" questions. Finally, we revised a few questions in order to accommodate changes in reference periods and changes in federal programs. A detailed description of the changes between Round 6 and the Round 7 questionnaire is included in Appendix C of the User's Guide for Restricted and Public Use Files. Prior to the launch of the Round 7 data collection effort, we pretested the survey instrument to confirm the order, flow, and clarity of the revisions. The instrument is available from SSA (https://www.ssa.gov/disabilityresearch/nbs_round_7.html).

We divided the questionnaire into 13 sections, labeled A through M.[19]

Section A – Introduction and Screener. In this section, the interviewer confirms that correct sample person has been contacted and verifies that the sample person is still eligible for the survey. Ineligible respondents are deceased, incarcerated, not living in the continental United States, are active duty military, or have not received any SSA disability benefits in the last five years. Additionally, cross-sectional SWS respondents who are not currently working, and did not

---

[18] Among sample cases that were completed interviews only, there were 23 duplicates (46 sample cases total) between the RBS and cross-sectional SWS and 76 duplicates (152 sample cases total) between the clustered and unclustered samples within the cross-sectional SWS. Duplicates and triplicates also occurred with the longitudinal SWS.

[19] Sections F and H were deleted from the Round 5, 6 and 7 NBS–General Waves surveys, as they were focused on the TTW program.

work in the last six months, are ineligible for the survey. The screener allows interviewers to do the following:

- **Identify any barriers to participation** and, if needed, identify a proxy respondent. The sample member is offered every opportunity to complete the interview himself or herself; a proxy responds only if necessary.

- **Identify the need for an interpreter** for a respondent who speaks a language other than English or Spanish.

- **Administer a cognitive assessment** to ensure that the respondent is capable of completing a complex survey. This assessment includes elements of informed consent for participation, as it provides respondents with an overview of the survey and informs them of the voluntary nature of the interview.

We present three statements in the screener: (1) a brief description of what it means that the survey is confidential, (2) what it means that the survey is voluntary, and (3) an overview of the study topics. Then we ask respondents to restate or explain the concepts in their own words. If a respondent cannot restate a concept, the question is read a second time. If the respondent still cannot restate a concept, we ask if someone else (such as a friend, parent, caseworker, or payee) can answer questions about the respondent's health, daily activities, and jobs. We then pursue an interview with the proxy respondent, if available. Proxy respondents are administered the same cognitive assessment to ensure that they are capable of completing the complex survey on the sample member's behalf and also understand the voluntary nature of the survey. To minimize bias in reporting, we do not ask the proxy respondent to provide subjective assessments on behalf of the sample person with respect to, for example, satisfaction with jobs or programs. The constructed variable C_Rtype indicates whether the sample person or a proxy completed most of the interview.

Because they are used for survey administration purposes only, items from Section A are not included on the public use file.

Section B - Disability and Current Work Status. This section collects information on the beneficiary's limiting physical or mental conditions and current employment status. We ask about the disability status of the beneficiary by identifying the health condition or conditions that affect the beneficiary's work or daily activities and the age at which the condition first began limiting the beneficiary's activities. Then, we ask questions about the beneficiary's current work status. If a beneficiary is not currently employed, we explore their reasons for not working, the reasons that health prevents work among those so indicating, and the reasons why they have no expectation of working in the near future or no expectation of receiving benefits. For all respondents who became limited as an adult (after the age of 18), we ask about the respondent's ability to perform the same job they performed before they started to receive disability benefits. If a respondent reports that they have not received SSA disability benefits in the last five years, they are determined to be ineligible for the survey. If a cross-sectional SWS respondent reports that they are not currently working and have not worked in the last six months, they are ineligible for the survey. For those longitudinal SWS cases that are not working, we ask why they left their

for the survey. For those longitudinal SWS cases that are not working, we ask why they left their last job. We also ask questions to determine the job characteristics that are important to beneficiaries and collect information about work-related goals and expectations.

Section C - Current Employment. In this section, we collect detailed information about the beneficiary's current job. We ask beneficiaries for information about their job, such as job title, the type of work performed, type of employer, hours worked, benefits offered, how they found their job, and wages earned. These questions are asked for each job that the beneficiary currently holds. We also ask questions about the beneficiary's primary job (if they have more than one job), including questions about work-related accommodations—those received as well as those needed but not received. We ask additional questions to determine if the beneficiary's employer made changes to the workplaces to help the beneficiary work. We also solicit information about job satisfaction. We ask respondents about their motivation for working, the formal and informal supports they use to find or keep a job, the features of their current job that allow them to work with a disability, and the various challenges they face in their current job. We also ask questions that address disability disclosure in the workplace, whether other people with disabilities are employed at the respondent's place of work, and whether a benefit overpayment affected employment.

Section C_B – Employment in Past 6 Months. Questions in this section collect information about employment in the last six months, if the respondent is not currently working. We ask beneficiaries for information about all of the jobs they have worked in the last 6 months, including the type of employer; hours worked; benefits offered; how they found their job; wages earned; and the reasons for leaving employment, if applicable. We also ask whether beneficiaries worked or earned less than they could have (and, if so, why) and collect information about their experiences with adjustments to social security benefits due to work. We ask beneficiaries about their motivation for working in the last six months, the formal and informal supports they used to find or keep their main job, the features of their former main job that allowed them to work with a disability, and the various challenges they faced in their former job. We ask questions that address disability disclosure in the workplace, whether other people with disabilities were employed at the respondent's main place of work, and whether a benefit overpayment affected employment.

Section D - Jobs/Other Jobs During 2018. Questions in this section collect information about employment during the 2018 calendar year, excluding jobs noted in Section C or Section C_B. For example, we ask beneficiaries questions about the type of employer; hours worked; wages earned; and the reasons for leaving employment, if applicable. In other questions, we ask whether beneficiaries worked or earned less than they could have (and, if so, why) and collect information about their experiences with adjustments to social security benefits due to work (including if their work activity was affected by a disability overpayment).

Section SC – Benefit Suspense. This section is asked only of beneficiaries who are currently employed, or who have been employed within the last six months or in 2018. It asks beneficiaries how their work experiences have affected their social security disability benefits. Questions in this section differentiate between three types of beneficiaries: 1) beneficiaries who

have not received a suspension of benefits because of employment in the past year, 2) beneficiaries who are no longer receiving social security benefits due to recent employment, and 3) beneficiaries who received a suspension of social security benefits because of employment in the past year, but are now receiving benefits again. If beneficiaries are currently experiencing a suspension of benefits, or did so in the last year, we ask them for more information about the factors that affected their benefit receipt, specifically factors related to health, employment, and personal circumstances.

Section E - Awareness of SSA Work Incentive Programs. In this section, we ask questions to assess whether the beneficiary is aware of or is participating in SSA work incentive programs and services, including where they obtain information about SSA programs. We inquire if beneficiaries are aware that their SSDI cash benefits cease if their earnings exceed the substantial gainful activity threshold after completing the trial work period. We also ask a question to measure whether sample members are aware that most people who start working and lose their disability benefits are able to keep their health insurance.

Section G - Employment-Related Services and Supports Used in 2018. Questions in this section ask beneficiaries about their use of employment-related services and supports in calendar year 2018, including employment, job training, medical, therapy or counseling, and educational services. We also ask sample members about their reasons for, and satisfaction with, services and the nature of any services needed but not received.

Section I - Health and Functional Status. In this section, we ask about the beneficiary's health status and daily functioning, including the need for special equipment or assistive devices. We ask for information about general health status (via the SF-8TM scale), unmet health needs, informal supports, difficulties with activities of daily living (ADLs) and instrumental activities of daily living (IADLs), functional limitations, substance abuse or dependence, and treatment for mental health conditions.[20] In addition, we ask about episodic poor health, number of days confined to a bed, informal supports for daily needs, and transportation usage.

Section J - Health Insurance. Questions in this section collect information about the beneficiary's sources of health insurance, both at the time of interview and during calendar year 2018.

Section K - Income and Other Assistance. In this section, we ask about sources of income, including income received from earnings, social security, workers' compensation, and other government programs and sources. Additionally, we ask sample members about their perception of their financial situation and ability to save for an emergency or crisis.

Section L - Sociodemographic Information. This section collects basic demographic information about the beneficiary, such as race, ethnicity, education, parental education, veteran status, height and weight, marital status, living arrangements, including homeownership and possible plans to relocate, and household income.

---

[20] SF-8TM is a trademark of QualityMetric, Inc.

Section M - Closing Information and Observations. In this section, we collect address information for the sample person so that the $30 gift card may be mailed. The interviewer also records the reasons that a proxy or other assistance was required, if appropriate, and documents special circumstances.

E. Variable Changes Between Round 6 and Round 7 Public Use File

In Table I.2 we list important changes between the variables contained in the Round 6 and Round 7 public use files. This table is intended to assist researchers who may be using both datasets.

Table I.2. Variable changes between Round 6 and Round 7

Round 6 Variable	Round 7 Variable	Round 6 Variable	Round 7 Variable
Change Status: renamed **Reason: item renamed for consistency**

F. File Content and Technical Specifications

The NBS-General Waves Round 7 public access file contains 9,092 records and 1,042 variables. Variables are positioned on the file in the following order:

Survey administration variables. These variables are related to survey administration, including respondent type identifiers and other variables associated with conduct of the survey.

Sampling variables and weights. These variables include administrative variables used for sampling purposes and administrative data that provide additional descriptive information about the sample. See Table I.3 for a list of variables that contain SSA administrative data.

Variables from Sections A through M of the NBS questionnaire. These variables are ordered within each section by related questionnaire item number. Constructed variables created from source variables within a section are ordered at the end of each section. One constructed variable contains information from SSA administrative data. See Table I.3 for this variable.

SSA administrative data. These variables include a select set of data from SSA administrative records to enhance analyses. See Table I.3 for a list of variables that contain SSA administrative data.

As noted earlier, there were duplicate cases between the RBS and cross-sectional SWS, and between the clustered and unclustered samples within the cross-sectional SWS. Duplicates and triplicates also occurred with the longitudinal SWS. Duplicate cases share identical PIN (R7_PIN) and Case ID (R7_CASEID_PUB) values but will have unique Study ID (R7_SID) values. Sampling variables and SSA administrative variables may differ across a duplicate case because longitudinal SWS cases were originally sampled in Round 6 whereas the RBS and cross-sectional SWS cases were sampled for Round 7. The user notes in the codebook documentation will contain a note if any of the sampling variables or SSA administrative variables contain or were constructed from Round 6 information for the longitudinal SWS cases.

The public use file is available in a SAS "sas7bdat" format database and has the following technical specifications:

- Data set name: R7NBSPUF

- Number of observations: 9,092

- Number of variables: 1,042

- Date last created: October 20, 2021

Table I.3. NBS–General Waves Round 7 variables containing SSA administrative data in the public use file

Variable	Variable label
R7_ORGSAMPINFO_BSTATUS	Sample Benefit Type
R7_ORGSAMPINFO_HISPANIC	Sample Hispanic or Non-Hispanic
R7_ORGSAMPINFO_SEX	Sample Sex
R7_ORGSAMPINFO_SWS_SAMPLE	SWS Sample (=1) or not (=0)
R7_ORGSAMPINFO_LONGSAMP	R7 longitudinal SWS sample (=1) or not (=0)
R7_A_STRATA	Stratum for SUDAAN
R7_A_PSU_PUB	Analytical PSU scrambled (Public)
R7_C_TOTGOVCASHBEN_PUB	Total Government Cash Benefits Received (Includes SSA administrative records) (Public)
R7_N_BENSTATATINT2	Beneficiary status at Interview (if status is missing at the time of interview, we use SSA's administrative records at the time the sample was drawn) (From SSA administrative records)
R7_N_DAC	Disabled Adult Child (From SSA administrative records)
R7_N_DEPENLASTMNTH_PUB	SSDI dependent benefit payment amount last month (From SSA administrative records) (Public)
R7_N_IMP_CIRC	Circulatory impairment (From SSA administrative records)
R7_N_IMP_ENDO	Endocrine impairment (From SSA administrative records)
R7_N_IMP_ID	Intellectual disability (From SSA administrative records)
R7_N_IMP_INJ	Injury or poisoning (From SSA administrative records)
R7_N_IMP_MISSING	Missing impairment (From SSA administrative records)

Variable	Variable label
R7_N_IMP_MUSC	Musculoskeletal impairment (From SSA administrative records)
R7_N_IMP_NEO	Neoplasm (From SSA administrative records)
R7_N_IMP_NERV	Nervous system impairment (From SSA administrative records)
R7_N_IMP_OTHER	Other impairment (From SSA administrative records)
R7_N_IMP_PSYCH	Psychiatric impairment (From SSA administrative records)
R7_N_IMP_RESP	Respiratory impairment (From SSA administrative records)
R7_N_IMP_SENS	Sensory impairment (From SSA administrative records)
R7_N_MTHSEARLENT_PUB	Months Since Earliest SSI or SSDI Entitlement Date (From SSA administrative records) (Public)
R7_N_MTHSRECENT_PUB	Months since start of most recent SSI and/or SSDI spell of eligibility (From SSA administrative records) (Public)
R7_N_PIAATINT_PUB	Primary Insurance Amount (PIA) (From SSA administrative records) (Public)
R7_N_REPPAYEE	Representative Payee (From SSA administrative records)
R7_N_SSDILASTMNTH_PUB	SSDI payment last month (From SSA administrative records) (Public)
R7_N_SSDINOMCR_ATINT	SSDI no Medicare at Interview (From SSA administrative records)
R7_N_SSILASTMNTH_PUB	State and federal SSI payment last month (From SSA administrative records) (Public)
R7_N_STW_ATINT	SSA benefits are in suspense or terminated because of work at interview (From SSA administrative records)
R7_N_STW_EVER	Ever experienced suspense or termination of cash benefits due to work (From SSA administrative records)
R7_N_TOTSSBENLASTMNTH_PUB	Total SSI and SSDI payment last month (From SSA administrative records) (Public)
R7_N_TTWPARTEVER	TTW participant ever (From SSA administrative records)
R7_N_MEDEX_ATINT	Medical improvement indicator at interview (From SSA administrative records)
R7_N_MEDEX_ATSAMP	Medical improvement indicator at sampling (From SSA administrative records)

G. Codebook Documentation

To aid the user, this codebook provides extensive documentation for each variable on the file including:

- *Variable Name.* The variable name as it appears in the data file

- *Question Number.* Hardcopy question corresponding to the variable

- *Label.* Variable label (a brief description of the variable)

- *Question Universe.* Indicates which respondents were eligible to be asked the question

- *N.* Total number of observations on the data file

- *Question Text.* The text of the question as it appears on the survey instrument (English only)

- *User Notes.* Provides additional information to the user regarding the variable

- ***Construct Specs.*** Provides specifications used to create the constructed variables
- ***Eligible.*** The number of cases eligible to receive the item (*excludes logical skip and partial cases not asked the item).*
- ***Width.*** Width of data associated with the variable
- ***Type.*** The type of data (numerical or an character)
- ***Format.*** SAS format assigned for value labels

Additionally, we display unweighted frequencies for all categorical variables and unweighted means for continuous variables. For ease of use, frequencies are suppressed when the frequency display would continue on more than one page (for example A_STRATA).

For items where a frequency distribution is displayed, frequency counts, numeric values and their labels, and row percentages and cumulative percentages are displayed. For items where a mean is displayed, minimum and maximum values, standard deviations, median, missing (the number of cases with missing data for the item), and base N (the number of cases with data for the item) are also displayed.

The data user should refer to the General Waves--National Beneficiary Survey Round 7: User's Guide for Restricted and Public Use Files (Callahan et al. 2021) for information about study methodology, file and variable construction, and use of sampling weights.
